

The Association of Strength and Balance with Functional Outcomes in Patients with ACL Reconstruction

Dr. Patrick Pabian, PT, DPT, SCS, OCS, CSCS
 John Boyd, SPT
 Victor DeRosa, SPT
 Roman Makarov, SPT
 Dr. Eric Greeno, PT, DPT, SCS, CSCS

University of Central Florida
 Doctor of Physical Therapy Program

Introduction

- 120,000 ACL injuries per year
- 40%-50% of all ligamentous knee injuries
- ACL reconstruction surgery costs
 - Approximately \$1 billion per year
- 18% re-injury rate
- Kinesiophobia
- Implications¹⁻⁴

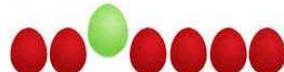

Introduction (cont.)

- Reliable assessment of function
- Quantify function
- Strength and weight distribution vs. self-assessment

Methods

- Retrospective
 - Mean age: 20.9 years (± 4.7)
 - Gender: 8 males, 9 females
- Inclusion
- Exclusion

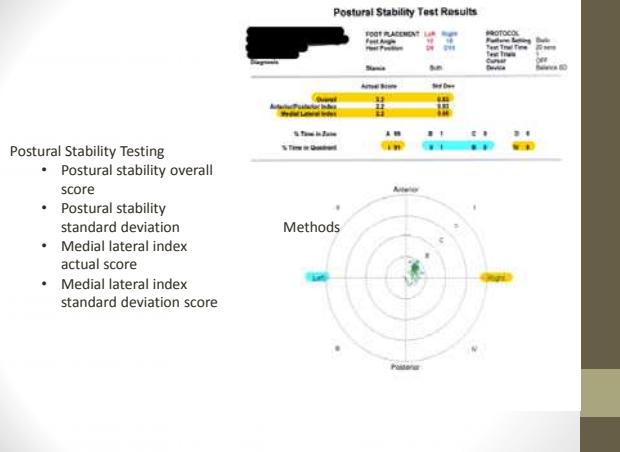

Methods

- Instrumentation
 - Biodex Balance System
 - Isokinetic Dynamometer
 - 2000 International Knee Documentation Committee (IKDC) Subjective Knee Evaluation Form

Methods

- Balance Indices & Sway
 - 1 trial
 - 90° squat
 - Blinded visual feedback

Methods

- Strength Testing
 - Sportsmed120 used by OSM
 - 5 minute bike warm-up/stretching
 - Warm-up 25%, 50%, 75% of perceived maximal effort
 - 120°, 15reps, 0-105° to measure total work and fatigue assessment
 - 3 minute rest between sets and extremities tested

Comprehensive Evaluation

Right knee Right

Gender: Male

Age: 140.0

Diagnosis: R ACL reconstruction BPIR

Involved-to-uninvolved strength deficit

Strength deficit calculated as:

- Peak torque deficit
- Peak torque to body weight deficit
- Total work deficit
- Total work-to-body weight deficit

Methods

- Self-perceived functional ability (IKDC)
 - Assess 18 areas of function
 - Low scores represent low level of function
 - High scores represent high level of function

IKDC Subjective Knee Evaluation Form

2000 IKDC SUBJECTIVE KNEE EVALUATION FORM

SUMMARY

Rate your knee from 0 to 100. 0 = worst, 100 = best.

FUNCTIONS

1. Rate the highest level of activity that you can currently perform without significant assistance.

2. Rate the highest level of activity that you can perform without assistance.

3. Rate the highest level of activity that you can perform with minimal assistance.

4. Rate the highest level of activity that you can perform with moderate assistance.

5. Rate the highest level of activity that you can perform with significant assistance.

6. Rate the highest level of activity that you can perform with no assistance.

7. Rate the highest level of activity that you can perform with no assistance.

8. Rate the highest level of activity that you can perform with no assistance.

9. Rate the highest level of activity that you can perform with no assistance.

10. Rate the highest level of activity that you can perform with no assistance.

11. Rate the highest level of activity that you can perform with no assistance.

12. Rate the highest level of activity that you can perform with no assistance.

13. Rate the highest level of activity that you can perform with no assistance.

14. Rate the highest level of activity that you can perform with no assistance.

15. Rate the highest level of activity that you can perform with no assistance.

16. Rate the highest level of activity that you can perform with no assistance.

17. Rate the highest level of activity that you can perform with no assistance.

18. Rate the highest level of activity that you can perform with no assistance.

19. Rate the highest level of activity that you can perform with no assistance.

20. Rate the highest level of activity that you can perform with no assistance.

21. Rate the highest level of activity that you can perform with no assistance.

22. Rate the highest level of activity that you can perform with no assistance.

23. Rate the highest level of activity that you can perform with no assistance.

24. Rate the highest level of activity that you can perform with no assistance.

25. Rate the highest level of activity that you can perform with no assistance.

26. Rate the highest level of activity that you can perform with no assistance.

27. Rate the highest level of activity that you can perform with no assistance.

28. Rate the highest level of activity that you can perform with no assistance.

29. Rate the highest level of activity that you can perform with no assistance.

30. Rate the highest level of activity that you can perform with no assistance.

SPORTS ACTIVITIES

8. What is the highest level of activity you can participate in at regular cost?

Activity describes whether the person is currently able to participate in a sport or other physical activity. If the person is not currently able to participate in a sport or other physical activity, please indicate the reason(s) why. If the person is currently able to participate in a sport or other physical activity, please indicate the level of participation (e.g., amateur, professional).

9. How often do you participate in sports or other physical activities?

10. How often do you participate in sports or other physical activities?

FUNCTION

31. How would you rate the function of your knee on a scale of 0 to 100 with 0 being normal, 100 being perfect?

PAIN OVER PAST 12 MONTHS

Methods

- Statistical analysis
 - Pearson's r correlation
 - IKDC correlation with Balance Indices & stability
 - Strength correlation with balance
 - IKDC correlation with strength
 - Association of strength with time on involved/uninvolved limb
 - Hierarchical regression

Results

- IKDC correlation with Balance Indices & stability
 - No statistical significance

		Correlations			
		IKDC score	Postural Stability Overall Score	Postural Stability Std Dev	Medial Lateral Index Actual Score
